Software Engineer – Front End

Lagos, Nigeria

Youverify's mission is to be the most reliable source of identity and address verification. Since being peer-selected by cohort members of Village Capital PayPal Fintech 2018, Youverify has continued to shift the verification landscape with our product offerings. As a company that provides modern and compliant identity and address verification services for government, global enterprises and startups, Youverify knows first-hand how difficult it may be for business to verify the identity of their customers, staffs and partners and we want to help to make this process as simple and as easy as possible. This is a unique opportunity to work in a fast-growing scaleup and product driven environment using new technologies and frameworks as we continue building our ID verification solution

Youverify is looking for a **Front-End Software Engineer** to join the **Technology** team in building a "best-in-class" product that delights our customers. We are seeking someone who has a strong technical background and is passionate about driving new features from inception through release. You will work closely with Product Design to build out reusable UI components for our design system and help drive the usage of these components throughout our customer and applicant facing UI's. You will drive the implementation of our customer facing dashboard.

What a typical week may look like at Youverify

- Building, testing, and shipping new customer facing code using modern web frameworks
- Collaborating with Design and Product to design and build new features
- Maintaining and building out new components for our design system

What we value in a Software Engineer:

- 2+ years' experience as a software engineer building client-side JavaScript
- A strong communicator who can bridge concepts across Design, Product, and other Engineering teams
- Experience building customer features using modern, component-based UI frameworks like React

- Knowledgeable and opinionated about client-side state management
- Strong understanding of the principles of Design, UI, and UX
- Experience building complex responsive designs using modern HTML, CSS, and JavaScript
- Experience integrating with REST APIs

Brownie Points:

- Proficiency using VueJS
- Proficiency using GIT
- Experience in Test Driven Development (TDD) and Behavioral Driven Development (BDD)
- Experience building accessible UI's
- Experience implementing A/B testing
- Experience building motion/animation-based UI's

What you get:

- A fast-paced and collaborative environment where we leverage the latest technology
- Hands-on coaching and professional development

Send your CV including link to your GitHub profile and portfolio to hr@youverify.co on or before 24th July, 2018.
